Usability Insights Evaluation

Group G's meeting with Envirocollective on October 21 has proven to be helpful, despite meeting time constraints. Information on what the state of the high-fidelity prototype is currently and what can be changed are laid out below, based on a questionnaire collecting quantitative data and qualitative data. The specific questionnaire was not given to members of Envirocollective during the meeting, but some data was still helpful in guiding possible answers and criticisms of portions from the prototype. From this point forward, more direct and tangible involvement in answering future questions and questionnaires are needed to ensure the project has the data it needs to make informed decisions.

Questionnaire Analysis and Observations:

- Section 1 - Quantitative Data

Questions	Observation
1. The visuals draw your attention throughout the website and makes the site interesting to explore.	Images and layout does help attract some attention, although more work can be done.
2. The layout of Repair Cafe's booking system is easy to navigate and my selection choices are clear	Navigation and choices on how to book make sense and are easy to understand.
3. The donate function was easy to find and the donating process was straightforward	Donate is easy with the donate button visible first thing on the donate page, and leads directly to online payment
4. Rate the navigation fluidity between pages and how clear the labelling for each page is	The hi-fi prototype does not include each page of the website, thus making some of the navigation awkward. Navigation otherwise and clarity between pages are good
5. Rate how physically demanding it is to locate a page or feature based on how many site interactions you need to make (scrolling, clicks)	Very few clicks are needed (within 3, maybe 4 on very few features) to navigate to a specific aspect of the site (like booking for Repair Cafe)
6. The website design made me want to learn more about Envirocollective's cause and their upcoming events	Lack of a homepage makes it less obvious what they have. The pages themselves are straightforward with access to their features

- Section 2 - Qualitative Data

Questions	Observation
How do you like the overall aesthetic of the	The visuals are lackluster, with a mediocre

website (colours, shapes, layout, typography) and what would you change?	colour palette backed with inconsistencies in typography and overall aesthetic. Finding a better colour scheme and making sure design choices are consistent around the board is very important
How did you feel navigating the website? Does it reflect Envirocollective's mission?	The website reflects Envoricollective's mission in that it displays all that they do and have to offer the community. It shows their involvement in climate action and care for similar causes. The visuals could maybe push this further with some changes
What felt confusing or unintuitive in the design?	Some of the filtering may need help in being less busy and more helpful
What would interest you to get involved to donate and volunteer?	Direct images of past events and pollinator shout-outs to past volunteers would help to emphasise that volunteer work is much appreciated and a great way to help the organisation and its mission. Donating needs more images and clearer ways in which people can donate and how they can donate.
What would make this website worth coming back to?	The booking system needs to work well and easy so people are more willing to participate in Repair Cafes, and a more organised Pollinator will get people to be engaged in what Envirocollective has been working towards

Overall, the general layouts and interactions shown in the meeting have been well received, although more of the website needs to be developed to fully grasp whether it works for Envirocollective or not. The resource directory is not of high priority, and developing the Pollinator more would have proven more useful. Visuals need an upgrade in order to keep people on the website and to ensure a pleasant experience when trying to find Envirocollective's news and events, as well as when learning about the organisation for the first time.

Unfortunately, the showcase of the high-fidelity prototype took the majority of our time with Rob. Notes were taken on comments and feelings said, and priority for the next meeting is to better gain data similarly to this questionnaire as we narrow down our design choices and integrate our designs in Wordpress for the final product in December.
