Summarized Project Background and Business Needs/Insights

Envirocollective's focus is on ENVIRONMENTAL STABILITY and CLIMATE ACTION

Envirocollective has:

- Become a HUB for similar movements and ideas (like Fridays for Future)
- Monthly BLOGS about what communities are doing
    - Must be searchable somehow - like sorted by YEAR
- Kept a nonpartisan approach, focused on solutions instead of problems
- Hosted youth forum for discussion on climate (and youth climate strike)
- REPAIR CAFE - helping groups monthly to help with anything people need fixed
    - SMASH LAB - 27% of Children get the non-fixable items as interactive learning material, breaking down the electronics and learning about different parts
    - Partnered with Salvation Army

ONLINE BOOKING (REPAIR CAFE)

- There must be a response/feedback to the people who are booking (ex., a message confirmation with rules on what they should bring)
- There must be a way to know who is working what days, and grey out what they are not able to work on (ex., an electrician gets a booking for a microwave; he does not have time for a PS5)
- An option to book by person, and specify what help they need (potentially under different categories)
- Regular updates on the availability of certain technicians or volunteers are in a way that is easy for both the site moderator and site viewer

RESOURCE DIRECTORY

- Directory of other collectives with similar goals that people can visit and help
    - EnviroCollective as a HUB for climate action organizations
- People should get excited about things they do and their message, thus should check out similar causes
- Collectives need to be searchable somehow

- Note: they are not necessarily partnered with most external resources or groups; they simply have a common goal

DONATE TAB

- Under a “get involved” page alongside volunteering
- Includes donating resources for repair cafe, recycling old electronics for others to use, and money transferable online

Envirocollective must lead by example, and the site should reflect that

- The site must ENGAGE people to willingly get involved
- Volunteers should be acknowledged for their work, and their own businesses shouted out
    - In turn, it will help motivate new volunteers to get involved

Northstar & carryover customers

For an organization focused on climate action, environmental sustainability, and community engagement, the North Star metric should measure active community participation and value creation

North Star Metric

Monthly Active Engagements in Community: *(*This will be calculated as the total number of Repair Café bookings completed + active volunteer slots filled + resource directory click-throughs to partner causes + blog reads).

Reason:

- **Reflects Core Utility:** It measures whether people are actively repairing items, finding local environmental initiatives, or consuming educational blog content.
- **Aligns with Rob’s Intent:** Measures how well the website engages people to willingly get involved and leads by example.
- **Guides Feature Design:**
    - Online Booking System: Focuses on successful appointment completions and volunteer matching.
    - Community: Focuses on driving active discovery of allied groups (Fridays for Future, etc.).
    - Volunteer empowerment: Encourages local volunteer events by exposing other facilities that want to participate in Environmental sustainability

Carryover Base

Carryover (Community & Volunteers): In a non-profit community collective setting, Carryover refers to the retained community base—the volunteers, recurring event attendees, and active users remain in touch as time goes on.

Carryover Volunteers & Technicians:

- Who they are: Tailors, fixers, and helpers who regularly log their availability and work monthly Repair Café events.
- Retention Mechanism: Public recognition on the site and shout-outs for their personal businesses.

Carryover Community Participants:

- Who they are: Community members who regularly bring items to the Repair Café, send their kids to Smash Lab, or return to read annual climate blogs.
- Retention Mechanism: Clear automated feedback/confirmations for bookings and up-to-date availability calendars.

Carryover Network :

- Who they are: External climate groups and initiatives listed in the Directory.
- Retention Mechanism: Easy access to campaign and advocate for climate action through EnviroCollective.

Metric	**EnviroCollective**	**Implementing**
North Star	Active Monthly Engagements (Bookings + Directory Visits + Blog Reads)	Design intuitive online booking with feedback loops & searchable directories by category.

Carryover Volunteers	% of Fixers/Technicians returning month-over-month	Volunteer shout-outs, business links, and easy scheduling updates.
Carryover Attendees	% of Repeat Repair Café & Smash Lab bookings	Automated confirmation emails with rules, clear site updates, and clean UX.

PROJECT ASSUMPTIONS

- WordPress as the main website program for booking page
- Implement Bookly and Figma assets into Wordpress
- Deliverables ready for the client prior to meetings with the client
- We get enough feedback from meetings with the client to guide us throughout the development process
- At minimum, the website will have an improved booking system, resource directory and newsletter, with visual upgrades of those pages at minimum for the first release.
- Implement a different search function for newsletter and Resources pages

PROJECT CONSTRAINTS

- Needing to learn 2 different software simultaneously to fix the booking process
- Keeping track of all our files in an organized way
- Getting as much as we can or need from the client meetings and being able to capture or write down the essentials
