Meeting on October 21 - Summarized Customer Notes

- Home page must engaging and easily navigable; top priority and most important page of the website
    - Incredibly important to guide viewers with direct access to the repair cafe, smash lab, and pollinator pages right away on the home page, and make them obvious and easy to access/promote
        - Home > Repair Cafe > Smash Lab > Pollinator
- Resource Directory
    - Overall not a big priority
        - Talk to Rob next meeting if Google Analytics sees enough users looking for resources on the Envirocollective website to determine if more attention is needed for that page
        - Wise to promote this page after the three main listed above, as users may not know it exists
    - Filters need to be decided based on what is intuitive and most organized, and do not overdo it
    - Knowledge Exchange is a longer archives library that cannot fit into the resource directory (a bin for longer works and reports)
- Overall Design
    - Colour palette needs change (check coolors.co and color.adobe.com)
    - Text on top of images may be hard to read and can be too busy
    - Consistency overall
        - Typography
        - Colours
        - Shapes and Assets
- What Rob Likes:
    - Access to Donate is very easy and obvious
    - Layout of booking slots for Repair Cafe in the right track
    - More images, image layouts, and important info near the top of the page help the pages be more engaging and keep interest
